Q4 Operations Report: Productivity Loss from Unassisted Vendor Migration

1. Quantified Productivity Drain Across 500 Employees

During the first 10 days of the health insurance transition, employees across Engineering, Operations, and Finance spent an average of 3.4 hours per person reading 40-page policy PDFs, searching hospital lists, and messaging HR on Slack. Total lost engineering and delivery time: 1,700 person-hours in October alone.

2. Impact of Deploying Role-Adaptive AI Workspace

By deploying the Role-Adaptive Enterprise Copilot with Pointed Voice-to-Doc Q&A and automated cross-silo conflict detection, employee query resolution drops from 45 minutes to 12 seconds, recovering 94% of lost productivity.
